

ENTIRELY
ITALIAN
PRODUCED.

A concentrate
of technology for
performance at the
highest levels.

The Nice Touch operating control panel comes with a multifunction capacitive touch screen display on a glass surface. Each instrument on the dentist console has a dedicated menu for a simple, intuitive and precise way to activate all the functions and set the specific parameters especially when Endodontic and Surgery treatments need to be performed due to the possibility of adjusting the torque, the number of actual rpm's, the reversal time, Auto Forward and the Reciprocating function. The scaler handpiece can be used for SCALING, PARO or ENDO thanks to the 3 different pre-setted working modes. All micromotors and scalers can be easily connected to the in built peristaltic pump system for external steril irrigation.

ASSISTANT CONSOLE

Assistant console with glass control panel and capacitive tactile technology mounted on a double articulated arm.

OPERATOR CONSOLE

Operator console equipped to accommodate up to 6 instruments, with extra-long hoses, in the SPRIDO (top delivery) or hanging hoses version.
